Environmental Scanning of Authority Control in Digital Repositories

The background of the slide features a soft-focus image of several hot air balloons in various colors (yellow, orange, blue, and red) floating over a green field under a clear sky. The balloons are scattered across the upper half of the image, with one large yellow and orange balloon prominently in the center-left.

- Problems in name authority control in institutional repositories. (Salo, Dorothea. 2009)
- FAO's Survey Open Access Repositories in the Agricultural Domain (2009-2010): Only 40% is using some sort of authority control, especially for Journal titles.
- Survey of ARL-member institutions: Despite the system challenge, half use LCNAF in some capacity (Goslen, Anna S. 2011)
- Western Name Authority File Project: Authority Control for Digital Collections Survey, 2016.

Name Disambiguation: Authority Control & Identity Management

- **Name Disambiguation**

- Manual disambiguation (e.g., LCNAF);
- Author registry site;
- Automatic name disambiguation.

(Elliott, Sarah. Survey of Author Name Disambiguation: 2004-2010)

- **Identities:** Scopus author identifier and profile, VIAF, ISNI, ResearcherID, ORCID, Worldcat identities...

- **Shifting from Authority Control to Identity Management**

(Identity Management or Authority Control? Liss, 2017 ALA Annual)

Engaging User Interfaces Using Author Information

Good news! Starting February, the grace period for redeeming waitlisted books will increase to 48 hours.

10 December 1830 - 15 May 1886.

Emily Dickinson was an American poet. Born in Amherst, Massachusetts, to a successful family with strong community ties, she lived a mostly introverted and reclusive life. After she studied at the Amherst Academy for seven years in her youth, she spent a short time at Mount Holyoke Female Seminary before returning to her family's house in Amherst. Thought of as an eccentric by the locals, she became known for her penchant for white clothing and her reluctance to greet guests or, later in life, even leave her room. Most of her friendships were therefore carried out by correspondence. ([Source](#).)

Subjects & Keywords: Debate on the Use of Controlled Vocabularies

- **Information retrieval research** shows that the use of CVs does not improve precision and recall;
- **Indexing researchers** show that CV usage can improve indexing consistency.
- **This study found that: LCSH works best for topical terms; Bio thesaurus ITIS works better for scientific terms.**

(White, Hollie. Examining scientific vocabulary: Mapping controlled vocabularies with free text keywords, 2013.)

- **User search query compared with FAST terms and legacy keywords in the IR: FAST terms match better.**
(Hanrath & Radio. 2016)
- **Researchers assign subject/keyword metadata to their own materials in IRs; Tagging**
- **Advantage of controlled vocabularies lies in linked data?!**
- **The web's impact to library practices and digital repositories: BIBFRAME! What about digital repositories**

What about the Web: Metadata & Text Analysis

- **Web archiving: Capturing E-Publications of Public Documents (CEP); SWISH-E based IGI search engine**
 - **Illinois Subject Tree, Metadata Generator available**; worked as RA;
 - **Author generated metadata is rare, supplement with:**
 - Inclusion of plain-text; extraction of noun phrases; knowledge of the ownership of the website; collection level metadata; classifier program for assigning subject classifications (Jackson, 2005)
 - **Automatic subject heading assignment** for online government publications using a semi-supervised machine learning approach. (Hu, X., Jackson, L., Deng, S. and Zhang, J., 2006.)
- **“Making the link”**: metadata; machine learning, natural language processing...
- **Learn about web technology, web standards**: HTTP, RDF, URIs...
- **Search engine optimization and digital repositories**

What about the Web: IR Working w/ Search Engines

- **Google's ranking algorithm:** PageRank; RankBrain
- **Google Scholar:** "Rank documents the way researchers do"
 - **Author page:** created for authors
 - Name, position, email, research interest, **publications** (title, author, journal name, volume, issue, year), **cited by** (Citations, h-index, i10-index), Co-authors
 - Author has no unique alphanumeric identifiers; use **statistical model** to try to tell authors apart; author mediation
- **IR Content Discovery:** Provide metadata structured according to **Google Scholar guidelines** can greatly improve the indexing ratio of IR content; transform Dublin Core to **High Wire Press tags** and include as meta tags in html (Arlitsch & O'Brien)

What about the Web: Get Metadata to be Understood by Search Engines

- **Schema.org:** a set of extensible schemas that enable webmasters to embed **structured data** to web pages for use by search engines and other applications.
 - Created by search engines (Google, Bing, Yahoo)
 - **Schema.org vocabulary** (entities, actions, relationships)
 - **Extensions**
 - **Bibliographic Extension** (<http://bib.schema.org/>)
 - **Extend Schema.org to represent archives** (<https://archival.github.io/schema-org/>)
- **Schema.org, Libraries & Digital Repositories:** Get metadata to be understood by search engines
 - WorldCat, Europeana, Islandora...

Changing Digital Repositories

Islandora

- Open source. Supports Dublin Core, MODSXML, MADS, METS, PREMIS...
- Authority Control in Islandora 7.x: **Entities Solution Pack**
 - **Entities:** Person, place, event, organization;
 - Entities created in **MADS** or **EAC-CPF**;
 - Build departmental directories and faculty profiles;
 - [Islandora FLVC](#): Some institutions populated author and department names (w/ basic authority control)
- **Integrated doi** (batch ingest module), **ORCID**.
- **Subject:** authority can be defined, e.g., <Subject authority="LCSH"...>
 - [FSU DigiNole case](#): local script to reconcile and add subjects to MODS records (Miguez, 2017)
- **Google Scholar tags** added to citation object's page; **schema.org tags** added to metadata fields

CONTENTdm

- Proprietary. Supports DC, XML.
- **Support multiple controlled name& subject vocabularies and thesauri:**
 - AAT, TGN, TGM, ULAN...
 - LCSH, FAST not included;
 - CVs can only be chosen when first establishing a field; local terms can be added, but not separated from controlled lists; validation enforced

Solid Waste Resource Recovery
Dekalb County Georgia

Ivan Ray Dory, University of Central Florida

Keywords
Waste recycling, Refuse and refuse disposal, Solid waste management

Abstract
A study was made of the feasibility of recovering resources from the solid wastes of an urban county existing solid waste management practice of future waste quantities and composition the art of recovering resources from so systems could be developed for the County a test year for three alternative systems cost alternative. In that no markets for a costs which may be applicable to the current costs, the cost of Resource Recycling Recommendations are for the provisions for future development of a Sanitary Landfill.

Various Approaches in Authority Control/Identity Management/Discovery etc.

- **System approach:** Develop new functionality; develop extensions and plug-ins; collaboration
- **Institutional approach:**
 - e.g., Name Authority Control: An institutional repository approach (Waugh, 2013)
- **Regional approach,** e.g., [Western Name Authority File Project](#)
- **National and International approach,** e.g., WorldCat Identities, VIAF, ISNI...
- **Individual reflection:**
 - Being a cataloger means to be not only a guardian of principles and standards but also a knowledge organizer, collaborator, researcher and an innovative and curious-minded lifelong learner (Diao & Hernandez. 2014)

The background of the slide features a soft-focus image of several hot air balloons in various colors (orange, yellow, blue, and red) floating in a light blue sky. The balloons are scattered across the upper half of the frame, with some appearing larger and more detailed than others. The overall aesthetic is clean and professional, with a light blue gradient background.

Some Discussions

- **A *Very Basic Understanding of the Big Environment (Broaden your horizon)**
 - How to organize knowledge and information? How does search work in various platforms and the web?
 - **Knowledge Organization Systems (KOSs); Every DL uses one or more KOS.**
 - **Primary applications:** Indexing, browsing, searching DLs
 - **Other applications:** Automatic annotation/indexing of contents/documents, automatic classification of contents/documents, developing Concept Space and ontologies for enhanced browsing/navigation, interoperability among DLs, linked data creation, publication venue authority control, visualization for browsing...
 - **Additional applications:** Automatic query expansion, Search Term Recommendation (STR) System (Sunny, TISS. Application of Traditional Knowledge Organization Systems in Digital Libraries: A Study on Current Status. Tata Institute of Social Sciences)
- **Understanding of Metadata and the Profession**
 - The Evolving Role of the Metadata Librarian: Competencies Found in Job Descriptions (Han& Hswe, 2010)
 - Metadata standards, schemas, vocabularies... “What then?”
 - While users and authors can contribute metadata, do Metadata Librarians have values to add? What are those values?

In addition...

- **Metadata Services is defined as:** Providing metadata consultation and assistance to university faculty and students in their research lifecycle.
- [The Research Lifecycle at UCF](#)
 - Sub-cycles: the Planning cycle, the Project cycle, the Publication cycle, the 21st century digital scholarship cycle
 - Dataset Metadata and Metadata Services
- **Challenges and Opportunities for Metadata Services**
 - [Connecting the dots: Defining scholarly services in a research lifecycle model](#), 2013.
 - [Diving into the University Knowledge Community](#), 2017.

Final Thoughts

- **Open mindset**
- **Learn new knowledge, information and skills**
 - Possible areas: vocabulary management, document encoding, data processing;
 - Learn some basic skills in working with data: XML, XSLT, RDF...
 - Learn to use tools, e.g., semi-automatic metadata editing tools: MarcEdit, Notepad++, OpenRefine...
 - Think out of the box: what can we learn from the web practices?
- **Be flexible and collaborative**
 - Flexible in working with different systems;
 - Collaborate with people beyond cataloging/metadata, Technical Services, your own library and the library field.
